**Re: Notice of *Ex Parte* Presentation by
US Datanet in WC Docket No. 02-361**

Dear Ms. Dortch:

On Friday, February 20, 2004, David Montanaro, John Turner, Brad Mutschelknaus and I, on behalf of US Datanet, met with Daniel Gonzalez, Senior Legal Advisor to Commissioner Kevin J. Martin, to discuss the above-referenced proceeding and to distribute the attached documents. During this meeting, US Datanet explained that it was an early "first adopter" of Internet protocol ("IP") technology and a pioneer in the deployment of many different IP-based services, including voice applications. USA Datanet installed the nation's first production SONUS network so that it could provide high quality and reliable IP-based services, including voice applications, to its customers. The Company chose to build its IP-based data network from the ground up rather than modify an existing network optimized for circuit-switched services because USA Datanet seeks to offer its customers the full range of benefits that IP-based services can make available.¹ USA Datanet now uses its network to provide communications services to several hundred thousand residential and small business customers.

USA Datanet also expressed its support for the AT&T Petition. The full range of IP-based services, including the "phone-to-phone" voice over IP ("VoIP") application at the heart of the AT&T Petition, qualify as "information services" within the meaning of the Act and, under current Commission rules and policies, are not subject to above-cost access charges. The Company explained that if the Commission nonetheless were to deny AT&T's Petition for

¹ See Diagram of USA Datanet's IP-Based Network Infrastructure, attached hereto.

Declaratory Ruling, it is crucial that the decision be precisely worded and narrowly confined to the specific application at issue in the AT&T Petition. A broader ruling is not warranted, or even permissible, given the scope of relief AT&T sought in its Petition. Moreover, the Commission should avoid adopting any decision that could be misinterpreted as applying to other IP-based voice applications not before the Commission, including those offered by USA Datanet. The Company emphasized the importance of avoiding such a broad-based impact at this time in light of the agency's decision to initiate a generic proceeding to address the regulatory treatment of IP-based services.²

US Datanet also explained that there is no basis in law or policy for permitting the assessment of access charge on a retroactive basis for any type of IP-based voice application, including phone-to-phone applications.³ The entire industry, including the ILECs urging retroactive applicability of access charges, have relied on the consistent statements and actions of the Commission indicating that Section 69.5 of the FCC's Rules, 47 C.F.R. §69.5, does not apply to any type of IP-based voice application, including phone-to-phone applications. Retroactive application of a decision to require payment of access charges for any type of IP-based voice application would not only be illegal, but also manifestly unjust and improper. This is particularly true since the ILECs have already been paid for all of the termination services they provided at rates that the Commission and state regulators have determined are fully compensatory, and any exposure to retroactive collection actions would have a devastating impact upon USA Datanet and other providers of IP-based voice applications. Therefore, the Commission should grant AT&T's petition, but in the event that it does not, the agency must make clear that it is announcing a new policy and that its decision has only prospective application.

Petition for Declaratory Ruling that AT&T's Phone-to-Phone IP Telephony Services Are Exempt from Access Charges, **WC Docket No. 02-361**;

Vonage Holdings Corporation Petition for Declaratory Ruling Concerning an Order of the Minnesota Public Utilities Commission, **WC Docket No. 03-211**;

Level 3 Communications LLC Petition for Forbearance Under 47 U.S.C. §16(c) for Enforcement of 47 U.S.C. §251(g), Rule 51.701(b)(1), and Rule 69.5(b), **WC Docket No. 03-266**

Dear Chairman Powell:

USA Datanet Corporation ("USA Datanet" or "Company"), by its attorneys, has previously written¹ to urge the Commission to grant AT&T's Petition for Declaratory Ruling

¹ See Joint Comments of The American Internet Service Providers Association, The California Internet Service Providers Association, The Connecticut ISP Association, Core Communications, Inc., Grande Communications, Inc., The New Mexico Internet Professionals Associations, Pulver.Com, and USA Datanet Corporation ("Joint Commenters"), filed Dec. 18, 2002; Joint Reply Comments of the Joint Commenters, filed Jan. 24, 2003. See Ex Parte Letter from Brad E. Mutschelknaus, Joan M. Griffin and Todd D. Daubert to Chairman Michael K. Powell, FCC, WC Docket No. 02-361 (Jan. 20, 2004); Notice of Ex Parte Presentation from Brad E. Mutschelknaus and Todd D. Daubert to Marlene H. Dortch, Secretary, FCC, WC Docket No. 02-361 (June 20, 2003); Notice of Ex Parte Presentation from Brad E. Mutschelknaus and Todd D. Daubert to Marlene H. Dortch, Secretary, FCC, WC Docket No. 02-361 (June 13, 2003); Notice of Ex Parte Presentation from Todd D. Daubert to Marlene H. Dortch, Secretary, FCC,

("AT&T Petition") in the above-referenced proceeding.² USA Datanet was an early "first adopter" of Internet protocol ("IP") technology and a pioneer in the deployment of many different IP-based services, including voice applications. USA Datanet installed the nation's first production SONUS network so that it could provide high quality and reliable IP-based services, including voice applications, to its customers. The Company chose to build its IP-based data network from the ground up rather than modify an existing network optimized for circuit-switched services because USA Datanet seeks to offer its customers the full range of benefits that IP-based services can make available. USA Datanet now uses its network to provide communications services to several hundred thousand residential and small business customers.

USA Datanet strongly supports the AT&T Petition and agrees that the full range of IP-based services, including the "phone-to-phone" voice over IP ("VoIP") application at the heart of the AT&T Petition, qualify as "information services" within the meaning of the Act and under existing Commission rules and policies should not be regulated as "telecommunications services." Thus, entities providing phone-to-phone VoIP services are and should continue to be entitled to connect to the PSTN without the crushing burden of paying existing subsidy-laden ILEC switched access charges. As AT&T, USA Datanet and numerous others have explained in the record herein, the Commission has never required providers of phone-to-phone VoIP to pay switched access charges, and to do so now would represent a destructive reversal of long-standing Commission precedent and policy encouraging the growth of all IP-based services.

Assuming for the moment that the Commission nonetheless were to decide to deny AT&T's Petition for Declaratory Ruling, it is crucial that the decision be precisely worded and narrowly confined to the specific application at issue in the AT&T Petition. A broader ruling is not warranted, or even permissible, given the scope of relief AT&T sought in its Petition. Moreover, the Commission should avoid adopting any decision that could be misinterpreted as applying to other IP-based voice applications. Were the Commission to issue a decision rejecting AT&T's Petition that lacked such precision, uncertainty would result which would hamper and threaten the further development of innovative IP services by numerous IP-based service providers like USA Datanet that offer a wide range, and are developing an even wider range, of IP-based services. The Commission should be careful to avoid such a broad-based impact at this time in light of the agency's decision to initiate a generic proceeding to address the regulatory treatment of IP-based services.

A more complete description of USA Datanet's service offerings will illustrate not only how its services are "information service" and different from some other IP-based

WC Docket No. 02-361 (June 4, 2003). *See also* Petition for Declaratory Ruling that AT&T's Phone-to-Phone Telephony Services Are Exempt from Access Charges, WC Docket 02-361 (Oct. 18, 2002) ("AT&T Petition").

² *See also* Petition for Declaratory Ruling that AT&T's Phone-to-Phone Telephony Services Are Exempt from Access Charges, WC Docket 02-361 (Oct. 18, 2002) ("AT&T Petition").

applications, but will demonstrate why, if AT&T's Petition is not granted, as USA Datanet submits it should be, it should be expressly confined to the particular IP-based application that was the subject of the AT&T Petition. As explained above, USA Datanet built its network specifically so that the Company could offer its customers the "*capability* for generating, acquiring, storing, transforming, processing, retrieving, utilizing, or making available information via telecommunications" See 47 U.S.C. 153(20) (emphasis added). Voice is only one aspect of the capabilities that USA Datanet can offer customers via its IP-based network. Indeed, one of the most innovative aspects of USA Datanet's network – as well as the services that USA Datanet offers via the network – is the flexibility it permits customers to have in choosing how, when and where to communicate, access, manipulate, store, and forward information.

The way in which the National Federation of the Blind ("NFB"), one of USA Datanet's customers, uses the capabilities of the Company's IP-based network illustrates why the mere fact that a customer could use its service provider's IP-network to place a phone-to-phone voice call should not automatically lead to the conclusion that the service offered is a "telecommunications service" subject to access charges. Specifically, the NFB relies on the capability for Interactive Information Services that USA Datanet offers via its IP-based network to provide its NFB-NEWSLINE®, which enables those who cannot read conventional print to have access 24 hours a day, seven days a week to dozens of newspapers, including USA Today, the New York Times, the Washington Post, the Los Angeles Times, the Wall Street Journal and dozens of local papers, simply by dialing a toll-free number using any telephone. Users can choose that day's, the previous day's, and the previous Sunday's issue of each newspaper on the service. The menu, which uses synthetic speech, allows users to change the speed and voice quality, spell out, or search for words, capabilities made possible because of USA Datanet's IP-based network. For more information about the NFB-NEWSLINE®, see <http://www.nfb.org/newsline1.htm>.

This revolutionary application receives digital transmissions from newspapers on the morning of publication, reformats the data for conversion to synthetic speech, and uploads the data to USA Datanet's IP/Web application platform. A user can access the NFB-NEWSLINE® by dialing a toll-free or local number. Calls to the NFB-NEWSLINE® are terminated to USA Datanet's Data Center, and when he selects the NFB application, the call is then connected by USA Datanet's network to the IP/Web application platform that supports the NFB-NEWSLINE® service. The NFB's "America's Jobline®" works in the same way to provide people who cannot see or read standard video display terminals, or who do not have or cannot use standard computers, with interactive audible access to job information. For more information about NFB's "America's Jobline®", see <http://www.nfb.org/jobline/enter.htm>. Attachment 1 provides a diagram of how these interactive information services are provided. The diagram shows that the services of USA Datanet manipulate the application's layers and

Michael K. Powell, Chairman
February 2, 2004
Page Four

provide end users with the capability of engaging in a net protocol conversion, both of which qualify the service as an information service.

The same IP-based technologies that enable the NFB-NEWSLINE® and "America's Jobline®" can be used to provide any end user with the capability of accessing any digital text in an audible format. For example, USA Datanet customers on business trips can use any telephone to secure access to any digital data in an audible format. The tremendous potential of this type of IP-based application increases exponentially when combined with other capabilities that the Company's network make possible that simply are not present with a circuit switched network or the functional equivalent. Perhaps the single most powerful capability of the USA Datanet design is its "Mid-Call Event Triggers," which are technically feasible because the underlying network uses Session Initiation Protocol ("SIP"). This underlying IP technology allows USA Datanet's customers to escape the limitation associated with traditional "One Call – One Circuit" communication network and USA Datanet to build virtually unlimited advanced calling information services. These services can range in scope from simple Call Re-Origination (a feature which allows multiple calls to be made in serial fashion), to sophisticated voice, data and multimedia applications discussed in following sections of this pleading.³ As such, a USA Datanet customer could (1) initiate a call through the USA Datanet platform from any standard telephone, (2) listen to a newspaper article that has been converted to synthetic speech on the Company's IP/Web application platform, (3) decide that a colleague should hear the same article and conference in that colleague by calling her mobile phone, (4) listen to the newspaper article with the colleague, (5) decide that they should both review a recent press release by the customer's company and access the digital text of the release in an audible format, and (6) decide that all of the employees of the customer's company be aware of an inaccuracy in the press release and send an e-mail message to those employees created using voice commands. Of course, the order of these steps can be reversed, and individual steps (as well as others) can be added or deleted or replicated during the course of the same call. Indeed, the person initiating a call or transaction has such flexibility due to USA Datanet's underlying IP-based network that she need not decide which steps or actions she intends to take, or even the identity of the recipient, if any, of the resulting communications, before initiating the call or transaction.

USA Datanet's network also supports Enhanced Internet Call Waiting ("EICW"), which unites voice and data applications. EICW allows dial-up Internet customers to manage their communications in real time while connected to the Internet. Specifically, upon establishing a dial-up Internet connection, a customer automatically notifies the Company's network that they are going online. If the customer subsequently receives a phone call while online, a call management screen will appear and allow the customer to decide whether to (1)

³ Other Advanced Call Capabilities include network based speed dialing, voice mail, and other information retrieval applications. These features will be enhanced over time to include call management, presence capabilities, and real time unified communications.

ignore the call, (2) take the call, (3) send the call to voicemail, (3) chat with the caller via text messaging, (4) establish a voice chat session, or (5) play a pre-recorded message.⁴

Although this letter describes only a few of the many capabilities that USA Datanet's network facilitates, the examples discussed above demonstrate that the type of IP-based technology deployed by the Company offers customers the capability for engaging in multiple protocol conversions during a single "call" or "transaction," including text-to-voice, voice-to-text, text-to-text (*e.g.*, newspaper text to instant message or e-mail text) and voice-to-voice (*e.g.*, conversation to audio file that can be attached to an e-mail, sent as an instant message, or stored as a voicemail message). In other words, thanks to USA Datanet's IP-based network, customers can generate, acquire, store, transform, process, retrieve, utilize, or make available any type of information via telecommunications. The services that USA Datanet offers fall squarely within the Act's definition of "information services," even if a customer chooses not to use all of these capabilities during a particular call (*e.g.*, the customer chooses only to engage in a real-time voice conversation during a phone-to-phone call), because inherent in the network supporting the services is the "*capability* [offered to end users] for generating, acquiring, storing, transforming, processing, retrieving, utilizing, or making available information via telecommunications" *See* 47 U.S.C. 153(20) (*emphasis added*).

⁴ The Company's network also supports call management services like USA Datanet's "Family Communications Tree," which allows members of a family or group to receive their calls and messages individually from the same local number. Specifically, calls to a particular family or group of users can be placed using a single number that terminates on USA Datanet's network, at which point the caller is asked to identify the specific party he wishes to contact. Based upon individual preset preferences of the party identified by the caller, the call would be forwarded to (1) an alternate number (or simultaneously to multiple numbers) for the called party, (2) a voicemail box for the called party, (3) a prerecorded message from the called party, or (4) a personal message to be played while the calling party is placed on hold until the called party is located.

Michael K. Powell, Chairman
February 2, 2004
Page Six

In sum, USA Datanet strongly supports grant of the AT&T Petition and urges the Commission to ensure that the full range of IP-based services remain exempt from the above-cost access charges that currently apply to circuit-switched telecommunications services. If the Commission nonetheless decides to deny AT&T's Petition for Declaratory Ruling, it is crucial that the decision be precisely worded and narrowly confined to the specific application at issue in the AT&T Petition. In any event, the Commission should avoid adopting any decision that could be misinterpreted as applying to the IP-based voice applications of other service providers. The upcoming NPRM on the regulation of VoIP and other IP-based applications is the appropriate vehicle for addressing the proper regulatory framework for the broad range IP-based services that USA Datanet and others provide.

Respectfully submitted,

USA DATANET CORPORATION

Re: Petition for Declaratory Ruling that AT&T's Phone-to-Phone IP Telephony
Services Are Exempt from Access Charges, WC Docket No. 02-361;

Vonage Holdings Corporation Petition for Declaratory Ruling Concerning an
Order of the Minnesota Public Utilities Commission, WC Docket No. 03-211;

Level 3 Communications LLC Petition for Forbearance Under 47 U.S.C. § 16(c)
for Enforcement of 47 U.S.C. § 251 (g), Rule 51.701(b)(1), and Rule 69.5(b),
WC Docket No. 03-266.

Dear Chairman Powell:

US Datanet Corporation ("USA Datanet" or "the Company"), by its attorneys, is writing to urge the Commission to grant AT&T's Petition for Declaratory Ruling in the above-referenced proceeding. USA Datanet provides high-quality, value-based communications services (including long distance, Internet access, international calling, calling cards, and personal toll-free services) to residential and small business customers using advanced VOIP technology. USA Datanet was an early "first adopter" of VOIP technology and a pioneer in the deployment of VOIP services. The Company installed the nation's first SONUS network to enable it to provide VOIP services to end users, and now utilizes that network to provide VOIP services to several hundred thousand residential and small business customers.

USA Datanet strongly supports AT&T's request for ruling. USA Datanet agrees that the full range of VOIP services -- including "phone-to-phone" applications -- qualify as "information services" within the meaning of the Telecommunications Act and existing FCC rules and policies, and therefore are entitled to connect to the PSTN without paying the crushing burden of

Michael K. Powell, Chairman
Federal Communications Commission
January 20, 2004
Page Two

existing subsidy laden ILEC switched access charges. As AT&T, USA Datanet and numerous others have explained in the record herein, the FCC has never acted to require phone-to-phone VOIP providers to pay switched access charges, and to do so now would represent a destructive reversal of long-standing Commission precedents and policies relating to IP-based services.

Having said that, the Company is aware that some ILECs now argue that AT&T's petition should be denied, *and* that the Commission should clarify that such a denial would have *retroactive* application. These ILECs have not been shy in revealing their intention to launch a torrent of access charge-related litigation targeted at VOIP providers if only the Commission gives them an opening to do so. Put plainly, denial of the AT&T petition could have a *crippling* effect on the emerging VOIP industry, but retroactive application of such a denial *would* have a *lethal* impact on it. Thus, USA Datanet submits this filing to address one issue: whether any determination made by the Commission that VOIP service providers are liable for access charges and USF contributions should apply retroactively. As shown below, there is no basis in law or policy for assessing such charges and contributions on any services provided or revenues earned or received prior to the effective date of the Commission's determination.¹

While most of the debate in this proceeding has been framed in terms of whether IP telephony services are telecommunications services or information services, it is not clear that the Commission will use this framework to determine what, if any, regulatory requirements should apply to these services. Chairman Powell has indicated in published remarks, as well as in impromptu comments made during the December 1 VOIP Forum, that the answer to the question of the appropriate regulatory treatment for IP telephony services may lie outside of the established "telecommunications"/"information services" dichotomy -- that the Commission may decide instead to "build from a blank slate up" to determine appropriate treatment.² It is also not clear that the Commission will resolve the question of whether IP telephony service providers are liable for access charges and USF contributions in the context of this declaratory ruling

¹ In the comments and reply comments USA Datanet previously filed in this proceeding, USA Datanet argued persuasively why IP telephony services should be exempt from access charges and USF contributions. See *Joint Comments of The American Internet Service Providers Association, The California Internet Service Providers Association, The Connecticut ISP Association, Core Communications, Inc., Grande Communications, Inc., The New Mexico Internet Professionals Associations, Pulver.Com, and US Datanet Corporation ("Joint Commentors")*, filed Dec. 18, 2002; *Joint Reply Comments of the Joint Commentors*, filed Jan. 24, 2003. Those arguments are still valid and have been echoed by many other parties in this proceeding. As such, USA Datanet will not reiterate those arguments in this filing.

² Remarks of Michael K. Powell, Chairman, Federal Communications Commission, On Voice Over IP At the Meeting of the Technology Advisory Council, FCC, Washington, D.C., Oct. 20, 2003, at 2.

Michael K. Powell, Chairman
Federal Communications Commission
January 20, 2004
Page Three

proceeding. Chairman Powell announced last November that the Commission will soon initiate a rulemaking proceeding to consider the appropriate regulatory treatment of IP telephony services.³

Action in Rulemaking Proceeding: No Retroactivity
Since No Statutory Authority

Regardless of the path chosen by the Commission, the Commission cannot lawfully apply any determination that IP telephony service providers are liable for access charges or USF contributions on a retroactive basis. If the Commission in the context of its rulemaking proceeding decides that IP telephony services are so unique that a new regulatory scheme is appropriate, and that providers of IP telephony services should be liable for access charges and USF contributions as a result, the law is clear: the Commission cannot change a service provider's past liability for access charges and USF contributions for services that have already been rendered. The Supreme Court stated plainly in *Bowen* that "retroactivity is not favored in the law," and thus that "a statutory grant of legislative rulemaking authority will not, as a general matter, be understood to encompass the power to promulgate retroactive rules unless that power is conveyed by Congress in express terms."⁴ The Communications Act of 1934, as amended (the "Act"), does not grant the Commission such authority, and nothing in the Commission's decisions dealing with the retroactive application of newly adopted rules suggests that the Commission believes it has such power.⁵ Since "Congress certainly knows how to draft a statute with unambiguous retroactive application," courts have been hesitant to construe statutes as containing such authority in the absence of an express provision.⁶

³ FCC News Release, "FCC to Begin Internet Telephony Proceedings," Nov. 6, 2003. USA Datanet urges the Commission to grant the AT&T petition. However, in the event that the FCC has lingering doubts, USA Datanet suggests that the issues raised by the AT&T petition simply be included in the NPRM. There is no basis to prematurely deny AT&T's petition outright.

⁴ *Bowen v. Georgetown University Hospital*, 488 U.S. 204, 208 (1988). As Justice Scalia stated in his concurring opinion, agencies cannot alter "the *past* legal consequences of past actions" without an express grant of statutory authority to do so. *Bowen*, 488 U.S. at 219 (Scalia, J., concurring) (emphasis in original).

⁵ See *In re 1998 Biennial Regulatory Review – Streamlining Of Mass Media Applications, Rules, And Processes*, 14 FCC Rcd 17,525, 17, 535 (1999); *McElroy Electronics Corp. For Authorization To Serve Unserved Areas In Metropolitan Statistical Market Area No. 2B, Los Angeles, California*, 10 FCC Rcd 6762, ¶ 16 (1995) ("McElroy").

Furthermore, the Commission cannot lawfully apply any rules adopted in the context of its rulemaking proceeding to alter the *future* legal consequences of IP telephony services provided by service providers in the past. Most notably, the Commission cannot require an IP telephony service provider to include revenues from IP telephony services furnished prior to the effective date of the new rules in its contribution base and make USF contributions on those revenues in the future. While the application of legislative rules to affect the future legal consequences of past events is not *per se* illegal in the absence of express statutory authority, it is illegal if the application is unreasonable.⁷ Such retroactive application of the Commission's rules would clearly be unreasonable in this case. The Commission previously rejected arguments that IP telephony service providers are required to make USF contributions on their IP telephony service revenues.⁸ In reliance on that finding, many IP telephony service providers have not attempted to recover these amounts through their charges to their customers.

Action in Declaratory Ruling Proceeding: No Retroactivity
Since "Manifest Injustice" Would Result

If the Commission decides to hold IP telephony service providers liable for access charges and USF contributions in the context of ruling on AT&T's petition for declaratory ruling, perhaps by finding that IP telephony services are "telecommunications" services and thus subject to Title II regulatory obligations, the result vis-à-vis the retroactive application of the Commission's finding is no different. Bottom line, it is not permissible. When an agency's finding in an adjudicative proceeding⁹ results in "new applications of existing law, clarifications, and additions," retroactivity will be denied "when to apply the new rule to past conduct or to prior events would work a 'manifest injustice.'"¹⁰ While the courts have enunciated various tests

for determining when to deny retroactive effect, the D.C. Circuit Court has observed that all of these tests reduce to considerations of equity and fairness and has suggested that detrimental reliance (or lack thereof) is a crucial point.¹¹

IP Telephony Service Providers Have Relied On FCC's Position. A balancing of equities here compels the conclusion that the Commission cannot apply access charges or USF contribution requirements to IP telephony services retroactively. USA Datanet and other IP telephony service providers have relied heavily on the Commission's firmly held and consistent position that IP telephony service providers are not liable for access charges or USF contributions for their IP telephony services. The IP telephony service industry has operated for years on the basis that no access charges or USF contributions would be assessed on IP telephony services, at least until such time as the Commission issued a definitive ruling to the contrary. Decisions on whether to invest in new equipment or technology and on how to price services have been made with this understanding in mind. Capital has been available to service

telecommunications regulation. See *Federal-State Joint Board On Universal Service*, Report to Congress, 13 FCC Rcd 11501, ¶ 91 (1998) ("*Report to Congress*"). As such, it can be argued that the Commission created new law regarding the applicability of access charges and USF contributions to IP telephony services in the *Report to Congress* and that any decision of the Commission in this proceeding to apply access charges and USF contributions to IP telephony services constitutes new law that cannot apply retroactively. The FCC is authorized to create rules using a variety of methods, including legislative rulemaking, adjudication, interpretive rulemaking and less formal means. See 47 U.S.C. § 154(i); *U.S. v. Storer Broadcasting Co.*, 351 U.S. 192 (1956). Provided the agency's actions fall within the scope of its Congressional mandate, incorporate an appropriate level of procedural fairness and are a "reasonable" method by which to reach the desired goal, they are a legitimate exercise of the agency's powers. KENNETH CULP DAVIS & RICHARD PIERCE, JR., ADMINISTRATIVE LAW TREATISE, CHS. 3, 6 (3d ed. 1994). The FCC's determination in the *Report to Congress* that access charges and USF contributions would not apply to IP telephony services at the time satisfies this criteria. The *Report to Congress* was compiled in the midst of a major ongoing, active docket addressing the full complement of universal service issues and policies. Specific public notice was issued regarding the plan to draft the report and expressly requesting participation from the community towards that end.

¹¹ See *Verizon Telephone Companies*, 269 F.3d at 1109-1110; *Communications Vending Corp. of Arizona, Inc. v. Citizens Communications Co.*, Memorandum Opinion and Order, FCC 02-314, rel. Nov. 19, 2002, at ¶ 33 ("*CVCA*"). In *Verizon Telephone Companies* and *CVCA*, the ILECs were forced to disgorge end user common line fees that they had previously charged to independent payphone providers, despite the fact that the FCC had previously and incorrectly found these fees to be reasonable and therefore lawful, and the ILECs had relied on the Commission's conclusion.

providers for investment in new technology in large measure because of the deregulatory policies of the Commission.

FCC Position Is Clear And Absolute In Multiple Orders, Proceedings, and Public Statements. The determination of the Commission in the *Report to Congress* with respect to the obligations of IP telephony service providers to pay access charges or comply with other telecommunications regulatory obligations is clear and absolute. To paraphrase the language of the *Report to Congress*, the FCC stated that *if* the only form of IP telephony that could be construed to be a telecommunications service, phone-to-phone IP telephony, was indeed found to be a telecommunications service, *and* phone-to-phone IP telephony was found to use the *same* access as other interexchange services *and* impose the *same* burdens on local exchange networks, then *at that point*, phone-to-phone IP telephony services *might* be subject to access charges which *might* resemble those imposed upon basis telecommunications services at the time.¹²

This message of “no, not now” with respect to the application of access charges to IP telephony services was loud and clear in other actions of the Commission as well. For example, in its notice of proposed rulemaking on reciprocal compensation, the FCC stated that “long distance calls handled by ISPs using IP telephony are generally exempt from access charges...”¹³ The message of “no, not now” with respect to the applicability of access charges to IP telephony services was also conveyed in what the FCC *refrained* from doing after adopting the *Report to Congress*. Most notably, the Commission has undertaken a detailed review of its access charge scheme, mandating extensive rule modifications.¹⁴ Nowhere in these orders did the FCC suggest that the providers of IP telephony services must pay access charges. Similarly, following release of the *Report to Congress*, the Commission refused to entertain petitions for declaratory ruling that access charges apply to IP telephony services. With respect to the U S West petition,¹⁵ the Commission never issued a public notice or otherwise request comment on the petition, which was later withdrawn. In addition, as noted previously, the Commission also declined to require carriers to include revenues from their IP telephony services in their contribution base for the USF.¹⁶

Finally, the public record is replete with statements from individual Commissioners that confirm that providers of IP telephony services are not liable for access charges or USF contributions. For example, in remarks to the International Telecommunications Union's Second Global Symposium for Regulators, Chairman Powell said that "in the United States we have yet to choose to regulate IP telephony and are confident of that decision. We do not assume it is simply a new form of an old friend."¹⁷ Other regulators have also understood this to be the Commission's policy. For example, Chairman Patrick Wood of the Texas Public Utilities Commission, in testifying before the Texas House of Representatives Committee on State Affairs, Subcommittee on Cable and Broadband, stated that "the FCC has said [voice over Internet] does not pay access charges" at least until such time as a large percentage of "all the voice traffic in America [travels] over the Internet."¹⁸

Reliance On FCC Position Was Reasonable. In light of these facts, the reliance of USA Datanet and other IP telephony service providers on the inapplicability of access charges and USF contributions is entirely reasonable. In every possible forum, and despite the repeated attempts of the ILECs and other parties to convince the Commission to do otherwise, the FCC and individual commissioners stuck with their position that IP telephony service providers are not obligated to pay access charges, or comply with other telecommunications regulatory requirements, such as USF contributions. As such, this case is distinguishable from *Verizon Telephone Companies* and other cases in which the court has held that a party's reliance was not reasonable and thus that the new rule would apply retroactively – e.g., where the relying party acted wholly on its own initiative and not per the direction of the FCC, or where the FCC's policy was never articulated outside of a single chain of proceedings that was subject to challenge to progressively higher legal authorities.¹⁹ USA Datanet notes that the ILECs have in many respects acquiesced to the FCC's position on access charges. Unlike the payphone providers in *Verizon Telephone Companies*, the ILECs have exercised few of their legal options for challenging the Commission's position; *inter alia*, they have filed few if any complaints

against IP telephony service providers at the FCC to establish their right to access charges and toll the applicable statute of limitations.²⁰

Furthermore, the reliance of USA Datanet and other IP telephony service providers on the Commission's position re the inapplicability of access charges and USF contribution requirements is reasonable because USA Datanet and the other IP telephony service providers have had no other option from a practical perspective.²¹ As noted previously, the Commission indicated in the *Report to Congress* that even if it determines that access charges should apply to IP telephony services, it is not necessarily the case that providers of these services will be liable for the same access charges as providers of ordinary telephony services – a logical conclusion, since it is not clear that ISPs use the public switched network in a manner analogous to IXCs.²² That said, if an IP telephony service provider does not want to rely on the Commission's position re the inapplicability of access charges, what amount of access charges does the service provider pay to the ILECs? Existing access tariffs assume traditional network configurations, and therefore contain rate elements frequently not used by providers of IP telephony. If an IP telephony service provider pays access charges at the rates applied to standard telecommunications services, the service provider would be reimbursing the ILECs for costs not legitimately associated with the actual services provided.

Similarly, if an IP telephony service provider does not want to rely on the Commission's position re the inapplicability of USF contributions, what does the service provider do – include the revenues in its contribution base? Such action would be contrary to the Commission's express direction that these revenues are not to be included. If the IP telephony service provider includes these revenues in its contribution base, USA Datanet seriously questions whether the IP telephony service provider can legitimately recover these costs from its customers.

Reliance On FCC Position Is Detrimental. If the Commission now determines that IP telephony service providers should be liable retroactively for access charges and USF contributions, there is no question but that USA Datanet and other IP telephony service providers will have relied on the Commission's statements in the *Report to Congress* and actions in other proceedings to their detriment. If IP telephony service providers must pay access charges and contribute to the USF for all services rendered in years prior, the harm to the IP telephony service industry will be significant. The amounts owed for access charges and USF

²⁰ See *Verizon Telephone Companies*, 269 F.3d at 1110; *CVCA* at ¶ 37.

²¹ This contrasts to the situation of the ILECs in *Verizon Telephone Companies*, where nothing forced the ILECs to impose end user common line fees on the payphone providers and thus to rely on the Commission's determination that such fees were lawful.

²² See *Access Charge Reform*, 12 FCC Rcd 15982, 16134 ¶ 345 (1997).

contributions will be substantial. Significant resources will have to be devoted to determining precisely what access charges are owed to what carriers, and undoubtedly those amounts will be the subject of considerable dispute. Needless to say, USA Datanet and the other IP telephony service providers will not be able to return to the customers to whom they have provided services in years past and recover these costs. The exorbitant new costs imposed on the IP telephony service industry will discourage capital investment and make it difficult if not impossible for service providers such as USA Datanet to provide innovative new services to their customers. Bottom line, American consumers will suffer if the Commission decides that IP telephony service providers must pay access charges and contribute to the USF for services rendered in years past.

LECs Have Not Been Harmed By FCC's Position. In sharp contrast, the ILECs have not suffered as a result of the FCC's decision not to hold IP telephony service providers liable for access charges or USF contributions. The ILECs have been paid for any access services they have provided, just not at above-cost access charge rates. Nothing suggests that universal service has been adversely impacted because the IP telephony service providers have not paid into the USF.

No Statutory Purpose Advanced By Retroactive Application. Finally, USA Datanet notes that no statutory purpose is advanced by the retroactive application of access charges and assessment of USF contributions. Nothing in the Act suggests that Congress wants the ILECs to be paid for their services at the highest possible rates or the USF to be over-funded. However, Section 230(b) of the Act evinces Congress' intent to promote the continued development of the Internet and "preserve the vibrant and competitive free market that presently exists for the Internet and other interactive computer services unfettered by Federal or State regulation."²³ Holding IP telephony service providers liable for access charges and USF contributions for services rendered in the past would discourage, not promote, achievement of this statutory goal.

Conclusion

The Commission should not be lulled into complacency by ILEC intimations that retroactive application of a denial of the AT&T petition is a modest reshuffling of the deck chairs in the industry. VOIP providers understandably and in good faith built their businesses in reliance upon FCC policies that exempted IP-based applications from the imposition of switched access charges. VOIP providers developed and charged low end user rates that did not include the recovery of switched access charges. There is simply no way for VOIP providers to go back and retroactively recoup switched access revenue from their customers for past services. Thus, any exposure to retroactive collections actions would have a devastating impact upon USA

Datanet and others in the VOIP industry. The FCC should grant AT&T's petition, but in the event that it does not, the Commission must make clear that it is announcing a new policy and that its decision has only prospective application.

Sincerely,

US DATANET CORPORATION
